

ABSTRACT

A housing having openings for exposing the operation surfaces of a PCI expansion card and a CNR expansion card to the outside at its front surface and at its back surface, respectively. A motherboard, which is incorporated in the housing, has multiple connectors arranged at specific intervals. The PCI expansion card has a PCI card electrode and is inserted into and connected with one of the connectors of the motherboard. A CNR expansion card has a CNR card electrode and is inserted into and connected with other one of the connectors of the motherboard. The PCI expansion card and the CNR expansion card are attached to the corresponding connectors in motherboard with the electronic-parts-implementing surface of the PCI expansion card and the electronic-parts-implementing surface of the CNR expansion card being faced to each other.
